

PDC-HK10

Thank you for purchasing this accessory kit. This is the accessory kit to fill the blank space of the front panel when the remote controller is relocated indoors.

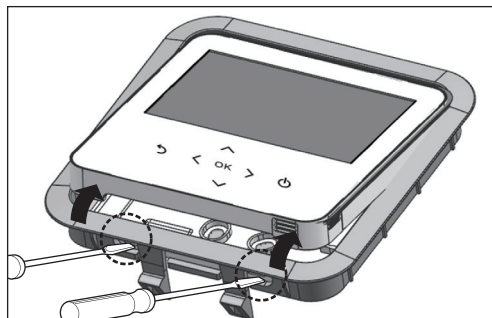

Components

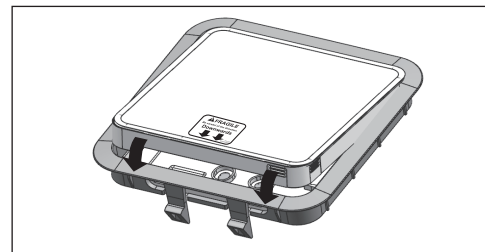

How to Install

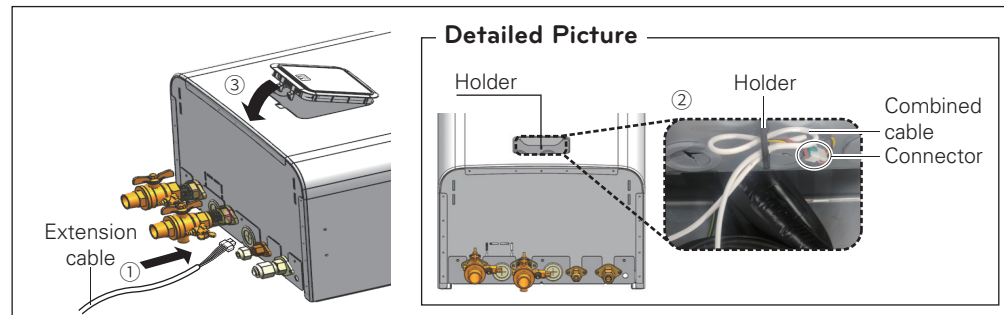

1. Separate the case(built-in) from the front panel using the flat-blade screwdriver, and disconnect the cable of the remote controller.

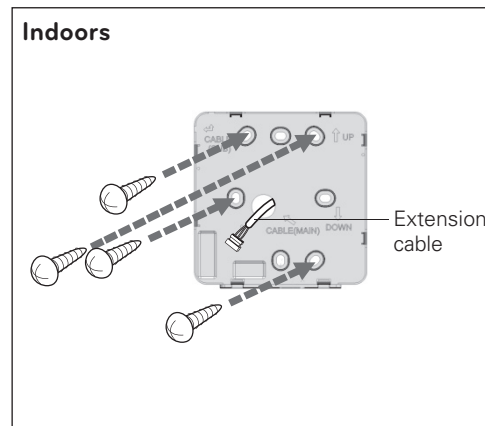

2. Disassemble the front case of the remote controller from the case(built-in), using the flat-blade screwdriver. In disassembling, be careful not to damage PCB/LCD, etc.

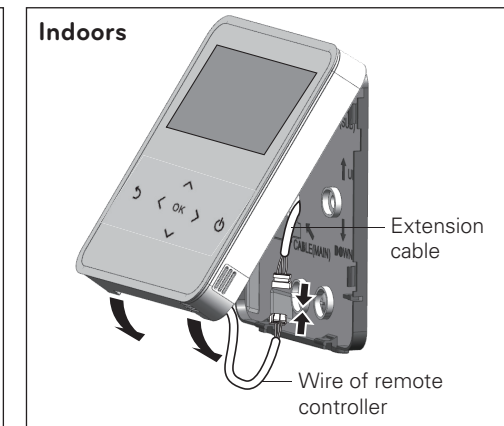

3. Assemble the cover plate with the case(built-in) according to the caution label on the cover plate.

4. ① Insert the extension cable into the indoor unit and connect it with the housing that was connected to the disconnected remote controller. ② Wind the combined cable with the connector around the holder to prevent it from being pulled, as shown in the detailed picture above. ③ And then, reassemble the case(built-in) on the front panel.

5. To install the remote controller separated from the front panel, place the back case on the desired location with extension cable inserted inside of it and fix it firmly with the provided screws.

6. Connect the extension cable with the wire of the remote controller. Finally, assemble the front case of remote controller with fixed back case on the wall.
